Week 7: The pitch

Read, Pitch, Question, Feedback

Becca is away today. You work in two small groups. Each person gets a 20-minute round, and the point is practicing questions: asking good ones and answering them.

Groups and times

Young, Yishuang, Marcio

0:00–0:20	Young
0:20–0:40	Yishuang
0:40–1:00	Marcio

Carol and Borna

0:00–0:20	Carol
0:20–0:40	Borna
0:40–1:00	Join the other group as listeners for Marcio's round

Bring: your Week 7 packet (the storymap worksheets from last week) and your .pptx. **Timekeeper:** in each round, a listener runs a phone timer and calls each switch out loud. **After class:** send Becca one combined PDF of your storymap worksheets, your slides, and the feedback cards you got.

Each round, 20 minutes

Min	Block	What happens
0–5	**Read**	The presenter passes around their storymap worksheets: the "Whole U" page and the slide plan. Listeners read silently and write **two questions** on the feedback card. The presenter sets up the deck.
5–10	**Pitch**	The presenter gives the 5-minute pitch. No interruptions. The timekeeper stops it at 5:00.
10–15	**Questions**	Listeners ask committee-style questions: start with the two you wrote, then whatever the pitch raised. The presenter answers in **30 seconds or less**, then stops. **Anyone can ask a follow-up, any time.**
15–20	**Feedback**	Listeners go through the card stop by stop, the answers included. The presenter writes the feedback on the last page of the packet, and the listeners hand over their cards.

ASKING

Ask what a committee member would ask, one thing at a time. Ask why and what if, not just what. **Always follow up** if an answer was long, vague or missed: "So is that a yes or a no?" Anyone can follow up, not just the person who asked.

ANSWERING

Short and to the point. One sentence that answers it, one sentence of why, then stop. If they want more, they will ask. Don't know? "I don't know yet; here's how I'd find out." Answer the question, don't defend the slide.

Results: say where you are

Either is fine. A Result slide that only lists what you did is not.

HAVE RESULTS

Show them, and say which hypothesis they favor. Say what it means, not what you ran.

PARTIAL OR NONE YET

Show what you have, and label the rest **EXPECTED**: what you think you will find, and which hypothesis that would support.

Questions and Feedback

Listener _____ Presenter _____

While you read (5 min): two questions the worksheets raise for you. Ask these first in the question block.

1	
2	

Stuck? Try: What does that number represent physically? Is this feasible in the time you have? Who uses this, and what decision does it support? What data do you wish you had? What result would change your mind?

During questions: the hardest question, and how the answer went. Circle one in each.

answered clearly **partly** **dodged** | **answers short and to the point?** **yes** **mostly** **no**

The pitch, stop by stop. Circle one, then add a note.

Stop on the U	Clear to me?	Note
Goal: who has the problem?	yes sort of no	
Obstacles: do the "but"s narrow to the research question?	yes sort of no	
Approach: competing hypotheses, and a comparison that tells them apart?	yes sort of no	
Result (real or EXPECTED)**: does it say which hypothesis it favors?**	yes sort of no	
Benefit: back to the person in the Goal, inside the scope?	yes sort of no	

The strongest stop, and the stop where I got lost first.

The one fix

If you changed only one thing before your next talk, change this:
